

Brandbook v1

Premium hunting field gear - cartridge storage and field-ready accessories

Horizon-ready

Brand-first commerce

Brand essence

RoeBux is a premium hunting field-gear brand built around preparation, precision, order, reliability and modern 3D-printed craftsmanship. The launch focus is cartridge storage: a premium made-to-order case and a practical cartridge holder.

Positioning

Premium cartridge storage and field-ready hunting accessories. Not ammunition. Not firearms. Not tactical/combat gear.

Experience

Cinematic, premium, technical, clean, calm and adventurous. Brand feeling first; shopping integrated second.

Promise

Designed by a hunter, for hunters. Built with modern 3D-printed manufacturing for precision, customization and continuous improvement.

Core rule

Sell trust, precision and field readiness - not hype, discounts or aggressive hunting language.

Logo system

Use the provided RoeBux logo artwork as the source of truth. Do not recreate, stretch, recolor or redraw the mark in theme code.

Stacked lockup

Horizontal lockup

Recommended usage

- Horizontal lockup: header, footer, packaging labels where width is available.
- Stacked lockup: brand documents, product cards, social square crops, larger print positions.
- Light logo variant: required for dark hero/header use; create as a proper brand asset, do not generate it in code

Logo rules

Keep the logo calm and premium. Clear space should be at least the height of the capital R around the lockup. Minimum size depends on medium, but the roe-buck detail must remain readable.

Do

- Use original transparent PNG/SVG artwork.
- Keep clear space around the mark.
- Use dark-brown logo on light surfaces.
- Use approved light variant on dark/video heroes.

Do not

- Stretch or squeeze the logo.
- Use yellow-gold or random colors.
- Place dark logo on dark hero without contrast.
- Add shadows, outlines or effects.

Contrast note: for transparent hero headers, prepare a true light logo asset. Do not rely on CSS filters for final brand use.

Color palette

The palette is warm, technical and premium. Brown/taupe/beige/off-white carries the brand; orange is an interactive action accent; muted dark charcoal/field green carry the brand's site background.

						
#534030 Primary brown Logo / headings	#45372C Deep brown Dark surfaces	#736357 Warm taupe Secondary	#856546 Field brown Hero / products	#5A483E Deep taupe Borders/text	#CBB994 Sand Borders/surfaces	#FAF9F9 Off-white Background

Usage ratio

Neutral/base

Typography

Typography should feel precise, clean and technical. Use Montserrat for headings and Roboto for body text. Keep copy short, declarative and calm.

Precision Storage. Built for the Field.

Caliber-specific storage for hunters who value order, reliability and quiet confidence.

TYPE SYSTEM

H1/H2: Montserrat Bold / Semibold, strong but not shouty.

Body: Roboto Regular, generous line height, no dense sales copy.

Microcopy: Roboto Medium/Bold, precise labels: caliber, color, dispatch, compatibility.

Avoid: exclamation-heavy copy, discount language, tactical phrasing, cramped typography.

Visual language

RoeBux visuals should combine field atmosphere with technical product clarity. Use cinematic gradients and real product imagery, not generic stock hunting clichés.

- Full-screen hero 1: immersive and calm, approximately 100vh on desktop.
- Subtle overlay/scrim for text readability; no busy sales banners.

- Product imagery: clean, tactile, exact. Field context supports the product, not the other way around.
- No generic camouflage wallpaper, military/tactical green dominance, or exaggerated textures.

Product & photography direction

Current product photos are reference/placeholder assets. Final imagery should be AI-enhanced or reshot later, but the design system should already anticipate premium product presentation.

Brand detail / lid mark

Signature Cartridge Case

Hero product. Premium, made-to-order, secure, caliber-specific, optional custom request. Price anchor TBD.

Field Cartridge Holder

Accessible practical product. Compact, grab-and-go organization. Do not claim original IP where licensed externally.

Custom Orders

Custom colors, logos or calibers via request. No live configurator in MVP. Keep it premium and controlled.

Image checklist

- Clean crop, tactile surface, real scale, caliber detail visible when useful.
- No fake ammunition sales framing backgrounds: off-white, taupe, muted field context.

Voice & copy

The RoeBux voice is calm, capable and precise. It should sound like field experience and product confidence, not hype.

Say

Precision storage. Built for the field.
Made to order. Checked before dispatch.
For hunters who value preparation and order.
Custom requests available.

Avoid

Kill-ready gear.
Combat/tactical wording.
Cheap webshop urgency.
Discount-first banners.
Overpromising legal/return claims.

Legal/editorial note: policy copy remains draft until reviewed. RoeBux is operated by Essens Engineering B.V.

Digital implementation

RoeBux is now built on Shopify Horizon. Keep the build native-first, block-first and editable in the Shopify theme editor.

1

Theme base

Shopify Horizon v3.5.1. Liquid, JSON templates, sections, theme blocks, snippets, locales and CSS assets.

2

Hero 1

Full-screen / full-viewport visual treatment. Prefer native Horizon hero/block settings. Use custom CSS only if needed.

3

Header

Transparent over hero, sticky/solid on scroll. Use Horizon-native settings first.

4

Admin-managed

Navigation, store name, products, collections and many editor settings live in Shopify admin/editor, not GitHub.

5

Git workflow

Work on development branch. Review diffs before commit/push. Do not publish from code.

Do / do not

Do

- Use RoeBux spelling everywhere.
- Use Horizon-native blocks/settings first.
- Use orange for key actions in a calm premium way.
- Keep green muted and mostly product/accent.
- Keep assets swappable and editor-managed.
- Mark placeholder legal copy clearly.

Do not

- Do not use Dawn-specific filenames/docs.
- Do not copy Blaser/KUIU/Harkila code/assets.
- Do not make the site conversion-first or discount-heavy.
- Do not create React/Next/Tailwind build layers.
- Do not move large reference assets into theme assets without approval.
- Do not present assumptions as validated facts.

Asset system & next steps

Use /reference-assets/ for source/reference assets and Shopify /assets/ only for files actively used by the theme. Keep the live build light.

Reference assets

/reference-assets/branding/
/reference-assets/logo/
/reference-assets/gradients/
/reference-assets/product-reference/

Reference only unless explicitly promoted to live theme assets.

Open decisions

- Final light logo variant for dark headers.
- Final field green hex approval.
- Final product names, dimensions, pricing.
- Hero video/fallback image selection.
- Legal copy review before launch.

Version note: v1 aligns with RoeBux Horizon build direction and current MVP documentation.
